Stryker S3™

Stryker S3 Med/Surg Bed
Stryker S3
The standard of care preferred by more hospitals than any other.

Easy Access Controls
Located on three sides of the bed, including the centrally-located foot end. Includes one-touch scale that allows accurate, repeatable readings with the patient or bed in any position.

Low-Bed Height
Industry-leading low-bed height and 500 lb weight capacity provide the safest and most comfortable platform for your patients.

Open Architecture
The Stryker S3 accepts any standard support surface including those for patient positioning, pressure redistribution and pulmonary therapy. The S3 accepts almost any form of traction, and is compatible with the vast majority of nurse call and networking systems.

Retractable Frame
Exclusive retractable frame allows proximal location to remain essentially unchanged when the head of the bed is raised, reducing the need for patient repositioning.

Siderails
Siderails are BackSmart™ designed with one-hand operation and an intermediate support position for patient assistance during bed entry and exit.

Dual-pedestal Design
Dual-pedestal integrated lift system reduces pinch points while providing excellent stability and cleanability.
A Proven Design, Refined

The Stryker S3 is based on the patient platform that is preferred by more hospitals than any other, the Secure® line of hospital beds. Years of refinement and input from caregivers have evolved the Stryker S3 into the med/surg bed that makes everyday care safer and easier for you and your patients.

Stryker S3 is safe. Reduce the risk of falls with iBed™ Awareness and the Chaperone® Bed Exit System. iBed Awareness monitors your smart bed configurations, displaying amber or green indicators. The Chaperone Bed Exit System monitors three zones, activating an alert when the patient moves out of position. Chaperone is so effective that Stryker provides a performance-based guarantee, pledging a fall reduction of at least 30 percent within the first year of use.

Stryker S3 is simple. Each control is intuitive, easy to access and out of the way of bedside stands and other hospital equipment. High-visibility data screen and one-touch scale provide information at a glance. The open architecture of the Stryker S3 accepts any 35 x 84-inch support surface including those for patient positioning, pressure redistribution, and pulmonary therapy. It accepts almost any form of traction, and is compatible with the vast majority of nurse call and networking systems.

Stryker S3 is secure. Be everywhere at once and know the status of all patient beds with Stryker S3. Stryker S3 can be a part of a Connected Hospital® system that links beds, to patients, to caregivers, to mobile devices using an open-architecture, cost-effective system. This enables remote monitoring of Stryker beds in real time from multiple locations, especially a nursing station, as well as instant notification of a change in status.

BackSmart design makes everyday tasks safer and easier. The Stryker S3 bed reduces risk of injury with siderails that have an intermediate support position for patient assistance during bed entry and exit.

Retractable Bed Frame: Exclusive retractable frame allows proximal location to remain essentially unchanged when the head of the bed is raised, reducing the need for patient repositioning.
Stryker S3
Designed to support the way nurses work every day.

Brake System
The larger, easier to activate, centrally located brake locks swivel and rotation on all four casters.

iBed Awareness
Exclusive local bed status system monitors important bed configurations and alerts you if parameters change.

Pump Holder and 110V Outlet
Convenient, integrated pump holder and optional 110V outlet help reduce trip hazards of loose cords.

Chaperone Bed Exit System with Zone Control®
For fall prevention, constantly track patient position using a patented, center-of-gravity, weight-based system.

Improved Ergonomics
Move the bed easily with smooth, convenient handles in both the headboard and footboard. Optional Zoom® Motorized Drive System makes transporting effortless.

How important is your choice of a med/surg bed?
With increasing reimbursement challenges for in-hospital injuries such as falls from a bed or hospital-acquired pressure ulcers, the choice of a bed is vitally important. The average cost to treat a hospital-acquired pressure ulcer is over $40,000.* The treatment for a fall from a bed is over $24,000.* The Stryker S3 is designed to reduce the risk of falls, and can accept surfaces that reduce the risk of pressure ulcers. The choice of a bed is critical to the outcomes of your patients as well as the financial well-being of any health-care organization.

*Data adapted from the Federal Register.
Stryker S3 Signature Series

The Stryker S3 Signature Series bed can be ordered with customized colors, wood laminate inserts and insignia, logo or award images to support the identity of your health-care organization. The design, with soft, friendly edges, offers an aesthetic that enhances the image of any hospital. Visit www.stryker.com/S3 to customize your S3 Signature Series bed today.

Save Time, Reduce Fall Risk

iBed Awareness

Patient falls are among every hospital’s top concerns. iBed Awareness is an exclusive local bed status system that monitors important bed configurations and alerts you if parameters change. The system monitors siderail positions, 30-degree Head Of Bed, brakes, Chaperone Bed Exit System and low-bed height, displaying amber or green indicators on the bed. It will also signal the hospital network or remote devices.

Chaperone Bed Exit System

Stryker’s patented Chaperone Bed Exit System with Zone Control senses the patient’s position with an accurate three-zone system, and activates an alert when a patient attempts to move out of a preset zone without assistance. Chaperone helps prevent falls and reduces false alarms. Stryker also provides comprehensive fall prevention educational program as part of the Chaperone Bed Exit System. The result is safer patients and lower costs.

Zone One  The largest zone; for patients who are expected to have significant movement without leaving the bed.

Zone Two  The middle zone; for patients who should not significantly change their position but will move arms and legs.

Zone Three  The smallest zone; for patients for whom very small movements warrant your immediate attention.

The S3 Patriot Series

A special series S3 med/surg bed is now available for veteran’s facilities. The S3 Patriot Series has patriotic motifs and graphics to demonstrate support for the men and women of the military.
Service and Technical Support

Three Quick-Response Service Options
Stryker can help you protect your products beyond the standard warranty with one of Stryker’s service agreements. Stryker’s service agreements are offered at attractive rates when new equipment is purchased.

**Stryker Gold Service Agreement**
Includes parts, labor, and travel, one preventative maintenance check per year per product, Joint Commission documentation

**Stryker Silver Service Agreement**
Includes parts, labor, and travel, Service Repair documentation

**Stryker Preventative Maintenance Service Agreement**
Includes one preventative maintenance check per year per product, Joint Commission documentation

Why You Should Choose a Stryker Service Agreement with Your Purchase
- Diminish equipment downtime
- Stabilize maintenance budget
- Ensure repairs within 24 – 72 hours
- Increase patient throughput

Technical Support and Service Call Center
The Technical Support Center is available 8 a.m. to 6 p.m. EST, Monday through Friday. The Service Call Center is available from 8 a.m. to 8 p.m. EST, Monday through Friday. We guarantee a call back from a service representative within two hours.

Financing
Whether you choose a capital or operating lease, you get full use of the products immediately. Contract terms and payment options are customizable.

Rentals
Through a partnership with Universal Hospital Services (UHS) you can now rent Stryker products. You have access to state-of-the-art equipment to quickly meet your specific needs. Every piece of rental equipment is rigorously maintained, inspected and patient-ready.

Training
Protect your equipment investment with Stryker-certified maintenance and training. Contact Stryker’s technical support department or your Account Manager or Field Service Representative to schedule Stryker-certified training.
